- 1 Remove 4 Screws, 2 on top and 2 on bottom, from each side to access Center Section Bolts.
- 2 With Plastic Covers off, Remove the 4 Screws per side. There is enough sensor wiring to take the center section off to be able to access the sensors easier.
- 3 After the Center Section and Foam Insert are off, Remove the End Pods by Removing the Inner Liner and Bolt in the Top Corner.
- 4 Remove Metal Center Section. Then Remove Skid Plate.
- 5 Remove Sensor Housings from Bumper and Install into Road Armor Bumper keeping the same orientation. Housings may need to be trimmed 1/16 as shown below.
- 6 Remove the Marker Lights from the End Pods and Transfer to New Bumper. Disconnect Wiring Harness and Run Wires Through New Bumper to Connect Sensors to their Corresponding Housings.
- 7 Install Double Nut Plates as shown below. Do not tighten as these need to be able to adjust. Install Accent Lights, Winch, and Fairlead. Install Fairlead first.

- 8** Install Intercooler Bracket as shown.
- 9** Install Frame Bracket over Intercooler Bracket as shown. Leave Finger Tight to be able to Adjust.
- 10** Measure Inside to Inside Weld In Bracket on the Bumper. Transfer Measurement to the Frame Brackets and ensure that they are centered with the Vehicle. Double check measurement and Fully tighten Bracket.
- 11** Install Front Bumper by Using Provided 1/2" Bolts with Washers and Lock Washers into the Double Nut Plates that were Installed into the Weld In Brackets. Also Mount the End Pod Intercoolers using the Factory Nuts. Adjust Fitment in and out, up and down, and tilt to liking and then Fully Tighten all Nuts and Bolts.

- 12** Install Skid Plate Using Factory Bolts. Plug in all Harnesses. Install the Factory Inner Liners to the Bumper. Install all Mesh. If holes need to be re-tapped, use #10-24 Tap.

**Finished**
